

DWA_04.3 Knowledge Check_DWA4

1. Select three rules from the Airbnb Style Guide that you find **useful** and explain why.

6.1 Use single quotes ' for strings.

By using single quotation marks for the string, you can use double quotation marks inside the template literal without the need for escaping

2.2 Use const for all of your references; avoid using var.

Using const proves to be useful especially, if you are working on a huge project That way you will be forced to reuse a variable you did not plan to use.

3.1 Use the literal syntax for object creation.

Its is much faster to read and know that this is an object by using literal syntax

2. Select three rules from the Airbnb Style Guide that you find **confusing** and explain why.

1.1 Primitives: When you access a primitive type you work directly on its value.

I just do not get it, I tried researching what is Primitives but it just do not make sense to what this rule means

1.2 When you access a complex type you work on a reference to its value.

I do not understand why they would even mention that.

8.1 When you must use an anonymous function (as when passing an inline callback), use arrow function notation.

I do not know what is a anonymous function.
